OMNARETH

PILOT PROGRAM

Prove it on your own operation

A 90-day pilot on one lane, facility or process, in shadow mode, with results you can measure

October 2026 · Pilot program guide

OVERVIEW

Why a pilot

The reference scenarios show what Omnareth catches. A pilot shows what it catches in your operation, against your data, without changing how your gates or your payment run work while you evaluate it.

The pilot runs in **shadow mode**: your systems send events to Omnareth and record its decisions, but nothing is blocked. At the end, Omnareth's decisions are compared with what actually happened, and you decide where to enforce.

SCOPE

One lane, terminal or process

A single road or sea lane, a port terminal or warehouse, or one process such as payments, insurance or healthcare claims, refunds, loan origination, telecom account changes, benefit payments or sign-ins and account changes, chosen for volume and value.

DURATION

90 days

Fifteen days to model, fifteen to connect, 45 in shadow mode and fifteen to review and decide.

RISK

No operational change

Shadow mode records decisions without acting on them until you choose to enforce.

PLAN

Timeline

DAYS	PHASE	ACTIVITIES
1–15	Discover & model	Map the process to protect (a cargo lane by road or sea, a port terminal, vendor payments, insurance or healthcare claims, refunds, lending, telecom, public benefits, account security or customer onboarding), its parties and data sources. Adapt the reference model and rules, and agree success criteria.
16–30	Connect	Deploy Omnareth in your environment or ours. Connect the event feeds for the pilot (custody and vessel events, payments, claims, refund requests, loan applications, account changes or identity checks), and validate with replayed data.
31–75	Shadow run	Live events flow through Omnareth; decisions are recorded but not enforced. Regular reviews of flags, denials and fraud cases; thresholds such as weight tolerance, invoice limits or claim timing are tuned.
76–90	Review & decide	Compare decisions with outcomes, verify the evidence trail, and agree where to enforce DENY and how to route FLAG.

Responsibilities

OMNARETH PROVIDES

Platform and expertise

Omnareth software and deployment support

Reference rules and models: cargo by road and sea, payments, insurance and healthcare claims, refunds, lending, telecom, public benefits, account security, onboarding

Rule modeling for your process

Weekly shadow-mode reviews

Final results report

YOU PROVIDE

Access and decisions

A pilot lane, facility or process and a sponsor

Event data: custody and vessel events, payments, claims, refunds, applications or account changes

Record data: shipments, vendors, policies, orders, applications, members, accounts, benefit cases or user accounts

Contacts in operations, finance and security

Time to review flags and fraud cases

ELIGIBILITY

Who can apply

The pilot program is open to qualified companies and organizations. We look for:

- You move or oversee high-value cargo by road or sea, operate a port, terminal or warehouse, or run payments, insurance or healthcare claims, e-commerce refunds, lending, telecom accounts, public benefit programs, online accounts or customer onboarding exposed to fraud or takeover.
- You can share event data for at least one lane, facility or process: custody events, payments, claims, refund requests, loan applications, account changes or identity checks.
- You can name an executive sponsor and an operations or security lead for the 90 days.
- You are prepared to review flagged and denied events with us during the shadow run.

How to apply

STEP	WHAT HAPPENS
Apply	Tell us about your company and what you would like Omnareth to verify or protect. An email confirms we have your application.
Qualification	We review every application and contact qualified organizations to discuss scope.
Scoping	Together we choose the lane, facility or process, data sources and success criteria.
Pilot	90 days from kickoff to a results report and an enforcement decision.

Apply on our website

Applications are made through the pilot program page on the Omnareth website; questions can go to pilots@omnareth.io. Applying does not commit you to a pilot.

RESULTS

Measuring success

Criteria are agreed during the first 15 days. Typical measures:

MEASURE	HOW IT IS MEASURED
Coverage	Share of pilot events (handoffs, releases, vessel events or payments) evaluated by Omnareth
Detection	Seeded test scenarios (e.g. impostor driver, forged bill of lading, payment to an unverified account) correctly denied; real incidents caught
Precision	Share of flags and denials that operators confirm were worth raising
Speed	Decision latency in your environment, against your gate-time or payment-run budget
Evidence	Share of decisions anchored and verified; time to assemble the history for a claim or an audit

What you receive

- The decision log for every pilot event, with reasons, and the history of each shipment or vendor.
- The fraud cases opened during the pilot, with the evidence behind each and your analysts' conclusions.
- A results report against the agreed criteria, including tuned rules ready for enforcement.
- A verification run showing every pilot decision checked against its on-chain anchor.
- A recommendation on where to enforce, what to flag, and what an expansion would involve.

> **Before the pilot: see the reference scenarios**
>
> Each runs end to end in one command and verifies every record on chain: cargo by road and sea (22 decisions, including a diversion at sea and a forged bill of lading), one impostor followed across 3 shipments, a payments fraud campaign against 3 vendors, and fraud rings against insurance claims, online refunds, lending, healthcare claims, telecom accounts, government benefits, online accounts and customer onboarding. They are the quickest way for your team to see Omnareth decide.
